SEMTM0029: Financial Technology Group Project

Part B: Presentation and Demonstration (20%)

Academic Year: 2025/26

Guidelines:

Presentation Day: Tuesday 7 May 2025. The detailed schedule for each group will be released at a later date.

The presentation will be in person, and all group members are expected to participate.

Presentation/Demonstration Requirements:

- There will be two parts:
  1. DApp Product Presentation
     - Explain your motivation, key design decisions, and the technical details of your DApp.
     - Clearly state the problem your DApp addresses and how it aligns with customer demands and market needs. Discuss how your solution considers commercial, financial, and technological constraints.
     - Slides must be included in this part of the presentation.
  2. Demonstration of the DApp
     - Using screen recording, provide a practical demonstration of your DApp (The user interface is deployed on a public website, and the blockchain backend is deployed on the Sepolia testnet.) in action.
     - Showcase its features, user interface, and all (or at least, key) functionalities.
- **The target audience for the presentation/demonstration should be the general public, assuming no prior blockchain knowledge or familiarity with your project.**
- The length of the whole presentation + demonstration should be within **15 minutes**.
- There is no strict time allocation requirement between the two parts, but they should be reasonably balanced (10/5 recommended).
- Every group member should participate in the presentation, ensuring a fair balance of speaking roles.
- After presentation/demonstration, several questions from the staff are expected.

Marking Rubric:

Your presentation and demonstration will be assessed based on the following criteria:

1. Communication & Clarity (5/20)

- Information is presented in a **clear, structured, and logical** manner, making it easily understandable for the general public.
- Presenters speak **clearly and confidently**, using appropriate tone and pace.
- Visual aids (including but not limited to figures, animations) effectively support the explanation.

2. Alignment with the DApp (5/20)

- The presentation effectively explains how the DApp **addresses the identified problem**.
- Design choices, technical aspects, and features are well justified in relation to the DApp.
- Demonstration accurately represents the **core functionalities and real-world application** of the DApp.

3. Demonstration Quality (5/20)

- The demonstration provides a **smooth, clear, and practical** showcase of the DApp in action.
- Key functionalities and user interactions are well explained and easy to follow.
- The DApp is demonstrated in a way that highlights its **usability and effectiveness**.

4. Team Coordination & Engagement (5/20)

- All team members contribute meaningfully to the presentation.
- Transitions between speakers are smooth and well-coordinated.
- The team demonstrates **professionalism and collaboration** throughout the presentation.
